

IPA ASSIGNMENT – 22

Name – Venya Kejriwal

Roll No – 24155517

1. Image Compression with Vector Quantization

```
import numpy as np
import matplotlib.pyplot as plt
from PIL import Image
from sklearn.cluster import KMeans

def vector_quantization(image, block_size=4, codebook_size=16):
    h, w = image.shape      h = h - (h % block_size)
    w = w - (w % block_size)  image = image[:h, :w]
    blocks = []
    for i in range(0, h, block_size):      for j in range(0, w,
block_size):
        block = image[i : i + block_size, j : j + block_size]
        blocks.append(block.flatten())
    blocks = np.array(blocks, dtype=np.float32)
    kmeans = KMeans(n_clusters=codebook_size, random_state=42,
n_init=10)
    labels = kmeans.fit_predict(blocks)
    codebook = kmeans.cluster_centers_
    reconstructed = np.zeros((h, w), dtype=np.float32)    k = 0
    for i in range(0, h, block_size):      for j in range(0, w,
block_size):
        block = codebook[labels[k]].reshape(block_size, block_size)
        reconstructed[i : i + block_size, j : j + block_size] =
block    k+=1
    reconstructed = np.clip(reconstructed, 0, 255).astype(np.uint8)
    mse=np.mean((image.astype(np.float32) -
reconstructed.astype(np.float32)) ** 2)
    rmse = np.sqrt(mse)    original_bits = h * w * 8
    index_bits = int(np.ceil(np.log2(codebook_size)))
    codebook_bits = codebook_size * block_size * block_size * 8
    compressed_bits = len(labels) * index_bits + codebook_bits
    compression_ratio = original_bits / compressed_bits
    return image, reconstructed, codebook, labels, mse, rmse,
compression_ratio

image = Image.open("img_2.jpeg").convert("L") image = np.array(image)
original, reconstructed, codebook, labels, mse, rmse, compression_ratio
= (
    vector_quantization(image, block_size=4, codebook_size=16))
print("Original Image Size:", original.shape) print("Block Size: 4 x 4")
print("Codebook Size:", len(codebook)) print("Number of Blocks:",
len(labels))
print("MSE:", mse) print("RMSE:", rmse)
print("Compression Ratio:", compression_ratio)
plt.figure(figsize=(10, 5)) plt.subplot(1, 2, 1)
plt.imshow(original, cmap="gray") plt.title("Original Image")
plt.axis("off") plt.subplot(1, 2, 2)
```

```
plt.imshow(reconstructed, cmap="gray") plt.title("VQ Compressed Image")  
plt.axis("off") plt.tight_layout() plt.show()  
Image.fromarray(reconstructed).save("vq_compressed.png")
```

OUTPUT

Original Image

VQ Compressed Image
